

Xia-Gibbs Syndrome Awareness Week

November 7-15

Xia-Gibbs Syndrome (XGS) is a rare genetic disorder discovered in 2014. It causes developmental delays and varying degrees of other medical and behavioral complications, profoundly affecting the lives of people with the syndrome and their families.

The objective of XGS Awareness Week is to raise awareness about Xia-Gibbs Syndrome, as well as raise our target goal of \$20,000 to help fund our programs, including research into Xia-Gibbs Syndrome!
